

Create Your Own Hummingbird Garden!

Try this at home or at school!

To help hummingbirds, you don't need a huge yard—just some thoughtful planting and care.

Here's how to start:

- **Plant nectar-rich flowers in red, orange, or pink (like bee balm, salvia, columbine, and trumpet vine)**
- **Hang a sugar-water feeder (1 part sugar, 4 parts water—never red dye!)**
- **Avoid pesticides and sprays**
- **Add smooth pebbles in a shallow bowl for water**
- **Place feeders high up, away from curious cats or raccoons**
- **Use shiny ribbons or reflective objects to deter predators**

Design your own hummingbird garden using this checklist.

Can you name your favorite flower and feeder spot?
